

ABSTRACT OF THE DISCLOSURE

A portable communication apparatus includes a radio communication unit, a detection unit, a notification unit, and a stop control unit. The radio communication unit performs communication
5 over a radio wave. The detection unit detects a wave, which is other than the radio wave, travels with a frequency in a predetermined area. The notification unit notifies a user of the portable communication apparatus a notification when the detection unit detects the wave. The notification indicates that the portable communication apparatus is
10 present in the predetermined area. The stop control unit stops the radio communication unit from performing a communication function, according to an instruction from the user.
